

Imperator

Imperator is a mid-season SU yellow sweetcorn with high MDMV resistance. It offers high factory recoveries and broad environmental adaptability.

83

Days to maturity
Approximate number of days from sowing to maturity

20 cm

Cob Length
Standard processor size requirements, typically ranging between 18–22 cm

18–20

Kernel Rows
Approximate number of kernel rows per cob; actual row count may vary with growing conditions.

Key characteristics

- Main-season variety for planting throughout the campaign
- Well adapted to varied environments, including high MDMV pressure
- High factory recoveries and easy field management
- Potential fresh-market use where SU types are accepted
