

Marmyto

Marmyto is a distinctive *Cucurbita maxima* variety producing 1–2 kg fruits with an oblate-blocky shape and rich orange skin. Good quality eating along with its internal texture make it well suited for culinary uses, while its shape and strong colour add decorative value. Medium vine growth produces one to two well-formed fruits per plant.

110 days

Days to maturity
Consistent performance in UK seasonal production.

1–2 kg

Average fruit weight
Versatile for both fresh cooking and retail displays.

Oblate-blocky

Fruit shape
Strong uniformity for efficient grading.

Key Characteristics

- ZYMV resistance supports secure field performance.
- Produces uniform, deep-orange fruits with strong visual appeal.
- Creamy, slightly sweet flesh supports excellent culinary performance.
- Vigorous hybrid growth ensures reliable, high-yield production.

Recommended for

- Fresh Market
- Culinary
- Farm shops

Growing Information

Spacing Standard medium spacing	Soil Requires fertile soils with good drainage	Storage Moderate storage potential.
Grading		

Strong uniformity for efficient grading.
