

PEDIGREE: KWS Cassia x California

NATIONAL LISTING: Recommended List 2024

High yielding feed that ticks all the boxes for grain quality and disease resistance, ideal for the farmer wanting bold grain and stiff straw. Consistently yielding between seasons and regions.

YIELD PERFORMANCE

Treated yield				Untreated yield	Soils	
UK	East	West	North	UK	Light	Heavy
103%	105%	101%	101%	86%	103%	104%

- Yields very well across the UK despite a number of challenging seasons.
- The choice variety on both heavy and light land in other regions.
- Performed exceptionally well for growers in the East.
- Very handy for a later winter barley sowing window if the season turns against you.

DISEASE RESISTANCE

Net blotch	Rhynchosporium	Brown rust	Mildew	BaYMV
5	5	7	6	R

Strong agronomics mean it's a low input, high output variety for farmers looking for yield and straw.

AGRONOMIC PERFORMANCE

Lodging treated	Lodging untreated	Height	Maturity	Brackling
8	8	95	0	8

One of the best standing winter barleys on the Recommended List, Bolton stands well in both treated and untreated situations. A true "close the gate" variety.

QUALITY

End use	Spec weight kg/hl
Feed	69.3

- Bolton works perfectly in your traditional winter barley slot, providing an excellent entry window for oilseed rape.
- Bolton is flexible enough to follow another cereal or a previous break crop, including winter beans.
