

VARIETY TECH SHEET

Stability in an unstable environment.

- Early maturity
- Great value
- Stable yields

MAKAYLA

Maize

A reliable maize variety suited for early silage and biogas.

Stability in an unstable environment

Makayla is an early Maize variety, providing exceptional value for money. After several years of trialling in the UK, it has performed outstandingly well across all parts of the country.

This variety promises good early vigour, eye spot and fusarium resistance and maintains a consistently low lodging score. Makayla also has a high stay green score making it perfect for biogas and silage use. The early maturity of Makayla gives you a secure silage harvest date and growers have reported high quality silage in the clamp.

Makayla is a stable variety you can rely on in an unpredictable climate.

KEY FEATURES

- Early variety.
- Recommended for early silage or biogas.
- Consistent stability in uncertain environments.

PROFILE

	FAO	180
	Brackling	0.5%
	Dry Matter	33.5%
	Leaf Senescence	6.8
	Eye Spot	6.5
	DM Yield t/ha	19.5
	Early Vigour	7.1
	Lodging	8.0

YIELD

Makayla averaged an impressive 58t/ha of fresh weight across 3 official Descriptive List trial sites in 2021. The high DM yield and high starch yield together ensures excellent digestibility. Makayla also scores a strong 213 (000's mj/ha) for its ME yield from fresh plant at harvest.

DISEASE

Exceptional resistance to Fusarium as well as Eye Spot. Makayla scores 6.5 for eye spot resistance.

AGRONOMY

Good standing and early vigour makes Makayla suitable even for more exposed sites. It can be drilled early and it's high stay green score makes it a flexible variety when it comes to harvest. It scores a 6.8 for leaf senescence and works well for both livestock and biogas production.

INPUTS

DAP or a specialist starter fertiliser will get the best out of this variety. Makayla follows the same growing recommendations as most Maize varieties. We recommend you consult your agronomist for more detailed input information.
