

PEDIGREE: Sherriff x KWS Siskin

NATIONAL LISTING: UK National Listed

Bolinder has produced outstanding yields in difficult seasons – improving on its results every year! Very high untreated yield – Bolinder is very happy on light soils and in an early and late drilling slot. Ideal to follow a break crop such as Oilseed Rape or Maize.

YIELD PERFORMANCE

Treated yield				Untreated yield	Soils		Sowing date	
UK	East	West	North	UK	Light	Heavy	Early	Late
104%	105%	103%	105%	88%	108%	103%	108%	108%

Driven by its exceptional agronomic merits, Bolinder is an ideal late drilling variety, showing 108% yield against controls when sown after 1st November.

DISEASE RESISTANCE

Septoria tritici	Yellow rust	Brown rust	Mildew	Eyespot	Fusarium	WOBM
7	9	6	7	6	[6]	R

Robust mildew and fusarium resistance offer confidence to growers looking to drill early. High Septoria resistance is key, whilst the risk of infection is high in particular regions across the UK.

AGRONOMIC PERFORMANCE

Lodging treated	Lodging untreated	Height	Maturity	Growth habit	Tillering
6	5	95cm	2	Erect	High

Medium resistance to lodging, Bolinder suits sowing after 1st October and will respond well to a robust PGR programme.

QUALITY

UKFM group	Spec weight kg/hl	Protein %	HFN
4H	76.4	10.5	287

Well suited as a feed variety.
